# Over 60 Years of Success

W. Ralston is now a part of the Inteplast Group, one of the largest manufacturers of Can Liners in North America. Established in the 1960's, W. Ralston has become Canada's market leader in waste management solutions for over 60 years. Our dedication to Quality, Service, Consistency and Innovation has been our top priority since the beginning.

Our steady growth has allowed us to expand across Canada into two manufacturing facilities in Brampton, Ontario and Drumheller, Alberta. Along with three warehouse facilities, all locations ISO 9001:2015 certified, we continue to expand in order to support our growing North American customer base.

Ralston has introduced numerous innovative 'Firsts' to the industry. We were one of the first Canadian companies to manufacture garbage bags, UL Ecologo® Certified Bags, CGSB Certified Vapour Barrier, and BPI Certified Compostable bags. This tradition continues today by constantly expanding our offering, delivering innovative products while allowing our customers to sell into new markets.

## Everything you need to know about polyethylene bags!

### DEFINITIONS

- **Film Strength:** Refers to the physical strength of the can liner.
  - Dart Drop Test:** Used to determine the resistance of a bag to local failure or puncturing of the film.
  - Elmendorf Tear Test:** Used to measure the resistance to tearing or puncturing.
- **Gauge:** A term used to describe the thickness of a liner. Linear Low Density liners are measured in mils, while High Density liners are generally measured in microns.
- **High Density Polyethylene:** Dense, economical, hydrocarbon-plastic having good moisture barrier and chemical resistance. Performs well under extreme temperature. Offers superior vapor and moisture protection. Not recommended for sharp or jagged objects.
- **Linear Low Density Polyethylene:** Superior stretch properties provide maximum puncture and tear resistance. Stronger than traditional low density material and non-porous. Better clarity than high density material.
- **Micron:** Based on one millionth of a meter, or one thousandth of a millimeter (.000000). Typically used to designate the thickness of High Density liners. High Density liners usually range from 6 to 24 micron in thickness.
- **Mil:** Measurement based on thousandths of an inch (.000). For example, a .55 mil bag would be .55 thousandths of an inch thick. Common Linear Low Density liners range from .35 to 2.0 mil in thickness. (i.e. .001 = 1 Mil)
- **Post-Consumer Polyethylene:** Plastic material recovered from the public and the environment. This material has typically been exposed to a wide variety of contaminants, both from the varied types of products that were carried in the plastic, and also from the many exposures the plastic may have in the environmental settings.
- **Post-Industrial Polyethylene:** Plastic material recovered from industrial sources, typically from machine start-ups, overruns, defective manufacturing processes, and related causes. This material is typically clean as it has been in a controlled environment.
- **Source Reduction:** Source reduction is decreasing the amount of materials or energy used during the manufacturing or distribution of products and packages. Because it stops waste before it starts, source reduction is the top solid waste priority of Environment Canada.
- **Sustainability:** A characteristic of a process or state that can be maintained at a certain level indefinitely.

### USEFUL FORMULAS

#### How to Translate Mils into Micron Equivalents

Mil Thickness	Micron Equivalent
0.23	6
0.27	7
0.31	8
0.35	9
0.39	10
0.43	11
0.47	12
0.51	13
0.62	16
0.66	17
0.70	18
0.74	19
0.78	20
0.82	21
0.86	22
0.90	23
0.94	24
0.98	25

#### How to Convert Microns to Mils

To convert microns to mils, divide the micron by 25.4 to arrive at true mil thickness.

$$7 \text{ Microns} \div 25.4 = .28 \text{ Mil}$$

$$34 \text{ Microns} \div 25.4 = 1.34 \text{ Mil}$$

#### How to Convert Mils to Microns

To convert mil to microns, multiply the mil by 25.4 to arrive at micron thickness.

$$1 \text{ Mil} = 25.4 \text{ Microns}$$

$$.31 \text{ Mil} \times 25.4 = 7.9 \text{ Microns}$$

#### How to Figure Net Case Weights

using the NIST 130 standard.

##### Linear Low

$$\text{Width} \times \text{Length} \times \text{Mils} \div 15 \times \text{case count} \div 1000$$

##### High Density

$$\text{Width} \times \text{Length} \times \text{Mic} \times .0027034 \times \text{case count} \div 1000$$

#### Measuring for Correct Can Liner Size

##### BAG WIDTH:

Use 1/2 of the outer circumference of the container.

##### BAG LENGTH:

Use the height of the container, plus 1/2 of the diameter of the container bottom, plus 3 inches (for overhang). For square or rectangular containers, use the diagonal of the container bottom, rather than the diameter.

## 3 STEPS TO CHOOSING THE RIGHT CAN LINER

The range of sizes, weights, and types of can liners is nearly overwhelming. How do you figure out which can liner you need? The confusion over the variety of products is understandable, but it's not insurmountable. We have developed an easy 3-step method to make shopping for can liners easy.

### Determine the proper can liner type.

There are two types of resins commonly used to manufacture can liners: Linear Low and High Density. To decide which one you need, answer this question: "Are sharp objects being thrown away?"

If yes, you need **Linear Low** (gauge/mils).  
If no, you need **High Density** (gauge/microns).

### What size container does the liner need to fit?

Ideally, you should have about three to four inches of overhang on the trash receptacles. The following are some guidelines to use when choosing the right size can liner.

A. Use the compatibility chart on this brochure.  
B. The gallon capacity or the size is usually printed on the container.

### How much does the liner need to hold?

Here you'll need to do some calculation. You need to determine the average weight of a full can liner in your environment.

Once you have decided on the number, check the product grid on this brochure under the can liner type and size that you have selected. Go across the grid to the column marked "Max Load". Find the number closest to the average weight figure you calculated and that's the can liner you need.

## Ralston and the Environment

Inteplast Group W. Ralston is committed to conducting our business in an environmentally responsible and proactive manner, consistent with our commitment to corporate citizenship, social responsibility and sustainability.

### WE AIM TO:

- Conserve natural resources.
- Minimize waste through source reduction and recycling.
- Handle and dispose of wastes through safe, environmentally responsible methods.
- Continue to respond to environmental requirements in the market place.
- Keep at the forefront to help find solutions to environmental concerns in the market.
- Strengthen our core belief that "less is more" – the thinner a product can be while still fulfilling its market use, the better the product is.
- Encourage our business partners and suppliers to strive for the same high levels of environmental performance.

We have helped create programs for environmental certifications such as Ecologo for recycling and Compostable bags for food waste.

### We were the first in Canada to:

- Introduce linear low density resin
- Introduce anti-bacterial additives
- Obtain Ecologo certification using post-consumer film
- Introduce certified compostable bio-resins.

**Ralston Quality Plastics**  
**100%  CANADIAN**

## 2100 Series

- Certified compostable by BPI (ASTM D6400) and BNQ 0017-088.
- All bags are printed with the compostable certification logo.
- Stock sizes fit most containers. Custom sizes available.
- BIOSAK® Compostable bags are brown in color for easy identification.

## 2400 Series

- 2400 Series Clear Food Contact Bags are approved by the Canadian Food Inspection Agency.
- Manufactured with food safe premium resins, these crystal clear polyethylene bags are ideal for packaging fresh/frozen meat/poultry stored at refrigerated and frozen temperatures.
- Available in various sizes and strengths.

## Clear Food Contact Bags

## 2500 Series

- High quality resin blended with post-industrial recycled resin—high strength bags with less plastic.
- 2500 Series product line is made from a virgin rich blend of recycled post-industrial LLDPE and premium Super Hexene resin. The 2500 line is our thickest line. All cases have perforated tabs on the side for individual bag dispensing.

EcoLogo™-Certified  
CCD-126/UL-126  
Garbage Bags

## 2600 Series

A true indication that "less is more" this product line is certified by the EcoLogo program CCD-126 for garbage bags. Contains recycled plastics collected from household blue box programs as well as post industrial-use markets.

W. Ralston 2600 Series is committed to improve environmental quality:

- by reducing energy.
- by reducing materials consumption.
- by reducing the impacts of pollution.
- Meet government and industry safety and performance standards
- Meet requirements of Fisheries Act and the Canadian Environmental Protection Act (CEPA) for manufacture and transport.
- Contains both post-consumer and household post-consumer material.

# NEW

EcoPerformance™ Can Liners are a cost effective and environmentally responsible product line allowing you to save money while reducing the amount of plastic to our landfill.

These liners contain high quality recycled content collected from household blue box programs and post industrial markets. Also accredited and certified by UL ECOLOGO CCD-126.

- Available in Black, Clear and White
- Optimal Strength & Performance
- High Quality Blend of Virgin & Recycled Resin
- Low Cost Solution
- Support Sustainability
- Minimum 20% Post Consumer-Industrial Recycled Content

## 2800 Series

- 2800 Series Industrial Garbage Bags frosted and black are made from high quality high molecular weight – high density resin. Premium quality resins bag making technology ensure optimum quality control and consistency. These bags have exceptional strength and are ideal for heavy, wet trash. These bags are in rolls easily dispensed from the perforated tabs located on the side of each case.

# 2900 Series

- Made with a virgin rich blend of recycled post-industrial and premium LLDPE resin.
- Meet government and industry safety and performance standards.
- Meet requirements of Fisheries Act and the Canadian Environmental Protection Act (CEPA) for manufacture and transport.
- Use Non-toxic inks.
- Contain post-consumer material.
- Contain household post-consumer material.

These recycled resins are often discoloured, especially those used for manufacturing clear type transparent bags.

The discolouration will be visible in the finished product, giving the transparent bag a slight tint of colour.

That colour tint will vary from batch to batch, a result of the batch processes for recycling plastic film collected at recycling centres.

This slight discolouration does not affect the overall performance or quality of the transparent bags.

**Household post-consumer material** means material collected from curbside and depot collection programs serving individual household and apartments.

**Post-consumer material** means a product which has served its end-use at the consumer level, has been discarded by the consumer, and would, unless diverted, enter the waste stream. This includes household post-consumer material.

**Recycled material** means post-consumer material and pre-consumer material. It does not include by-products of an industrial process that can be, and regularly are, used in either the same process, or in a different process, except that proportion which originated as post-consumer material and pre-consumer material.

## Disposable Gloves

Inteplast / W. Ralston has gloves for a variety of applications. They can be used for foodservice, janitorial, healthcare, hospitality and schools. From vinyl to nitrile to poly and hybrid, our gloves are sure to meet our customers' needs. Our vinyl gloves are an excellent choice for those who are looking for a latex free alternative. Our nitrile gloves are super strong and do an exceptional job creating a barrier of protection. Finally, our poly gloves offer superior comfort and fit while also providing another durable option that offers good barrier protection. Our vinyl gloves also come in both powdered and powder-free options.

### Nitrile Gloves

Colour  
Blue

#### Description

- Synthetic polymer material
- Alternative for Latex Allergies

#### Applications

- Healthcare
- Industrial
- Automotive
- Inspections
- Chemical Handling
- General Purpose
- Exam Grade

#### Benefits

- Strong barrier of protection from water, solvents, & chemicals with a very low rate of leakage.
- Elastic, durable and strong, not easily torn or punctured.

Also available in white/black nitrile - large volume order

## Our Product Lines

### Industrial Film

Ralston manufactures industrial film in both Alberta and Ontario. With film extruders and dies capable of supplying wide width and extra long jumbo rolls, we produce quality film products that meet many industrial applications across the country. From lining tractor trailers to protecting industrial machinery and hundreds of uses in-between, our film is extra tough and durable.

We also produce a wide variety of government approved construction films, made from virgin resins and UV resistance masterbatch. We're committed to this market and were the first company in Canada to get accreditation with CGSB.

### Industrial Garbage Bags

Ralston was a pioneer in the garbage bag market, manufacturing our first products in the early 1960's. Since then, we have expanded our product line to include the widest variety of products manufactured by any company in the country.

We take our position as a market leader very seriously. We were the first in Canada to introduce linear low density resin, the first to introduce an anti-bacterial additive, the first to obtain Ecologo certification for the use of post-consumer film, the first to offer one-at-a-time bag dispensing, the first to introduce degradable film, the first to introduce certified compostable bio-resins.

### Retail Products

Ralston has been involved in Consumer markets since we first began producing polyethylene plastic film over 50 years ago. We now offer a complete assortment of traditional garbage bag products under the Supersak brand including kitchen, outdoor, drawstring.

We also specialize in the growing market for recycling bags – transparent blue for dry recyclables, clear yard waste and transparent green for kitchen organics. Besides our own brand, we are one of the largest Canadian suppliers of private label bags and food cling wrap, marketed by an assortment of food store and mass merchandiser retailers in the country.

Our involvement in the retail market also includes producing clear plastic drop sheets and tarps to hardware and paint stores across Canada. We offer our own Cover-It brand or private label products.

### Biosak Compostable Bags & Film

Ralston has been a pioneer in developing the new and growing market for certified compostable bioplastics in Canada. In recognizing that the marketplace was demanding new solutions for solid waste disposal management, we were the first Canadian company to produce certified compostable bags. This material, marketed under the Biosak brand, facilitates the collection of organic waste and is now sold through traditional retail outlets from coast-to-coast.

We have also launched an industrial line of Biosak bags, packed in large quantities, for use in the growing Institutional, Commercial and Food service marketplaces.

All these compostable products are certified by both Canada's BNQ certification program and by the Biodegradable Product Institute in the United States. Biosak meets all the requirements of ASTM D6400-04 and the BNQ 9011/911.
