

Ralston
An Inteplast Group Company

W. Ralston Complete Product Catalogue

An extensive bundle product offering for all your institutional, foodservice, and consumer retail needs.

Over 60 Years of Success

W. Ralston is now a part of the Inteplast Group, one of the largest manufacturers of can liners in North America. Established in the 1960s, W. Ralston has become Canada's market leader in waste management solutions for more than 60 years. Our dedication to quality, service, consistency and innovation has been our top priority since the beginning.

Our steady growth has allowed us to expand across Canada into two manufacturing facilities in Brampton, Ontario, and Drumheller, Alberta. Along with three warehouse facilities, all locations ISO 9001:2015 certified, we continue to expand to support our growing North American customer base.

Ralston has introduced numerous 'Firsts' to the industry. We were one of the first Canadian companies to manufacture garbage bags, UL Ecologo® Certified Bags, CGSB Certified Vapour Barrier, and BPI Certified Compostable bags. This tradition continues today by constantly expanding our offering, delivering innovative products while allowing our customers to sell into new markets.

Institutional

- Foodservice
- Healthcare
- Industrial
- Government
- Paper Packaging
- Building Supply
- Small Office

Consumer

- Building Supply
- Big Box Stores
- Grocery
- Retail
- Home Office

We take pride in ensuring our level of quality and consistency is in each and every product we produce. Being "Canadian Made" means the world to our experienced and knowledgeable workforce that knows what it takes to deliver top quality products and provide top-notch service.

As we look toward the future, Ralston is committed to maintaining our market leadership position across the country. As in the past, we will continue to invest in our products, technological capabilities, and service enhancements.

Ralston and the Environment

Inteplast Group W. Ralston conducts our business in an environmentally responsible and proactive manner, which is consistent with our commitment to corporate citizenship, social responsibility and sustainability.

We have helped create programs for environmental certifications such as ECOLOGO for recycling and compostable bags for food waste.

We were the first in Canada to introduce linear low density resin, introduce anti-bacterial additives, obtain ECOLOGO certification using post-consumer film, and introduce certified compostable bioresins.

We aim to:

- Conserve natural resources
- Minimize waste through source reduction and recycling
- Handle and dispose of wastes through safe, environmentally responsible methods
- Continue to respond to environmental requirements in the marketplace
- Keep at the forefront to help find solutions to environmental concerns in the market
- Strengthen our core belief that "less is more" – the thinner a product can be while still fulfilling its market use, the better the product is
- Encourage our business partners and suppliers to strive for the same high levels of environmental performance

Definitions

Film Strength: Refers to the physical strength of the can liner.

Dart Drop Test: Used to determine the resistance of a bag to local failure or puncturing of the film.

Elemdorf Tear Test: Used to measure the resistance to tearing or puncturing.

Gauge: A term used to describe the thickness of a liner. Linear low density liners are measured in mils, while high density liners are generally measured in microns.

High Density Polyethylene: Dense, economical, hydrocarbonplastic having good moisture barrier and chemical resistance. Performs well under extreme temperature. Offers superior vapor and moisture protection. Not recommended for sharp or jagged objects.

Linear Low Density Polyethylene: Superior stretch properties provide maximum puncture and tear resistance. Stronger than traditional low density material and non-porous. Better clarity than high density material.

Micron: Based on one millionth of a meter, or one thousandth of a millimeter (.000000). Typically used to designate the thickness of high density liners. High density liners usually range from 6 to 24 micron in thickness.

Mil: Measurement based on thousandths of an inch (.000). For example, a .55 mil bag would be .55 thousandths of an inch thick. Common linear low density liners range from .35 to 2.0 mil in thickness. (i.e. .001 = 1 Mil)

Post-Consumer Polyethylene: Plastic material recovered from the public and the environment. This material has typically been exposed to a wide variety of contaminants, both from the varied types of products that were carried in the plastic, and also from the many exposures the plastic may have in the environmental settings.

Post-Industrial Polyethylene: Plastic material recovered from industrial sources, typically from machine start-ups, overruns, defective manufacturing processes, and related causes. This material is typically clean as it has been in a controlled environment.

Source Reduction: Source reduction is decreasing the amount of materials or energy used during the manufacturing or distribution of products and packages. Because it stops waste before it starts, source reduction is the top solid waste priority of Environment Canada.

Sustainability: A characteristic of a process or state that can be maintained at a certain level indefinitely.

How to Convert Microns to Mils

Divide the micron by 25.4 to arrive at mil thickness.
7 Microns ÷ 25.4 = 0.28 Mil
34 Microns ÷ 25.4 = 1.34 Mil

How to Convert Mils to Microns

Multiply the mil by 25.4 to arrive at micron thickness.
1 Mil = 25.4 Microns
0.31 Mil x 25.4 = 7.9 Microns

How to Figure Net Case Weights using the NIST 130 standard.

Linear Low:
Width x Length x Mils ÷ 15 x case count ÷ 1000
High Density:
Width x Length x Mic x .0027034 x case count ÷ 1000

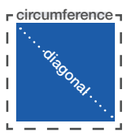

Mil Thickness	Micron Equivalent
0.23	6
0.27	7
0.31	8
0.35	9
0.39	10
0.43	11
0.47	12
0.51	13

0.86	22
0.90	23
0.94	24
0.98	25

Measuring for Correct Can Liner Size

Bag Width:
Use 1/2 of the outer circumference of the container.

Bag Length:
Use the height of the container, plus 1/2 of the diameter of the container bottom, plus 3 inches (for overhang). For square or rectangular containers, use the diagonal of the container bottom, rather than the diameter.

3 STEPS TO CHOOSING THE RIGHT CAN LINER

The range of sizes, weights, and types of can liners is nearly overwhelming. How do you figure out which can liner you need? The confusion over the variety of products is understandable, but it's not insurmountable. We have developed an easy 3-step method to make shopping for can liners easy.

Determine the proper can liner type.
There are two types of resins commonly used to manufacture can liners: Linear Low and High Density. To decide which on you need, answer this question: "Are sharp objects being thrown away?"

If yes, you need Linear Low (gauge/mils).
If no, you need High Density (gauge/microns).

What size container does the liner need to fit?
Ideally, you should have about three to four inches of overhang on the trash receptacles. The following are some guidelines to use when choosing the right size can liner.

A. Use the compatibility chart on this brochure.
B. The gallon capacity or the size is usually printed on the container.

How much does the liner need to hold?
Here you'll need to do some calculation. You need to determine the average weight of a full can liner in your environment.
Once you have decided on the number, check the product grid in this brochure under the can liner type and size that you have selected. Go across the grid to the column marked "Max Load". Find the number closest to the average weight figure you calculated and that's the can liner you need.

Institutional Garbage Bags
2400 Series: CFIA Clear

- 2400 Series is certified by Canadian Food Inspection Agency
- Manufactured from ultra-clear, food-safe premium resins
- Excellent moisture barrier properties lock in freshness
- Ideal for packaging fresh/frozen meat/ poultry stored at refrigerated and frozen temperatures
- Certified not to leak, tear, or puncture easily
- Stock sizes fit most containers - custom sizes available
- Perforated tabs on the side for individual bag dispensing

Institutional Garbage Bags
2800 Series: HDPE - Clear & Black

- 3 times stronger and more durable than ordinary polyethylene liners of the same thickness
- 2/3 less petroleum-based raw material to manufacture
- 1/3 of the thickness of ordinary low density polyethylene liners and 1/3 of the weight
- 1/3 of your ordinary shipping, storage, and warehousing costs
- Substantial cost savings per liner compared to linear low density liners
- Resistant to extreme temperatures (-40° F to +212° F)

Proshield® Industrial Film

Ralston manufactures industrial film in both Alberta and Ontario. With film extruders and dies capable of supplying wide width and extra long jumbo rolls, we produce quality film products that meet many industrial applications across the country. We also produce a wide variety of government approved construction films, made from virgin resins and UV resistance masterbatch.

Proshield® Polyethylene Film 4000 Series

- All our film is packed in clear PE sleeves with product identification labels both inside and outside the sleeve
- All pallets are wrapped for safer transportation and easier storage
- Colour-coded labels are provided for identification of size and product type
- Available with custom formulas and in custom lengths & widths
- Linear rich formula provides superior strength

MADE IN CANADA

Get Reddi® Foodservice Products

W. Ralston continues to introduce world class food service products to the Canadian market. We carry a complete stock line of aluminum foil, food wrap, and pound bags under Inteplast and Get Reddi® brands. We pay attention to detail and take pride in our quality, superior packaging, and trilingual verbiage to remain ahead of the competition. All products are CFIA, FDA, Kosher, MDL certified (where applicable).

Retail Products

W. Ralston has been involved in consumer markets since we first began producing polyethylene plastic film 60+ years ago. We now offer a complete assortment of traditional garbage bag products under our Ralston, Supersak, and CoverIT brands including kitchen, contractor, drawstring bags as well as drop sheets and more.

Supersak™ Retail Contractor Bags: Black & Clear

- Supersak™ Contractor bags are the strongest bags we manufacture
- Made from virgin and post-industrial and post- consumer recycled material
- Excellent tear, puncture, and stretch resistance
- Perfect for heavy and sharp objects as well as any liquids
- Perforated tear-off roll in dispenser carton for easy use
- UL Ecologo® Certified - UL-126
